# Precision RVs in the Near Infrared

# Suvrath Mahadevan (Penn State)

**Collaborators:** Larry Ramsey, Chad Bender, Ryan Terrien, Fred Hearty, Jason Wright, Sam Halverson, Arpita Roy, Jim Kasting (Penn State), Fred Hearty, Matt Nelson, Adam Burton (UVa), Steve Osterman (CU), Scott Diddams (NIST), Michael Endl (UT), Christian Schwab (Yale)

## Earths & Super Earths Around M Dwarfs

Mid/Late M stars are attractive targets since RV amplitude of terrestrial planets in HZ is so much higher than around F, G, K.

# Earths & Super Earths Around M Dwarfs

M dwarfs emit most of their photons in the red and NIR. (Pavlenko et al. 2007)

A NIR spectrograph can probe mid-to-late M dwarfs.

# Habitable Zone Planet Finder (HPF) on the HET

# HPF on HET

#### **Emission Line Calibration**

- Fiber-Fed Spectrograph
- Built to be very stable
- Spectrograph slit illumination must be very stable.

Star

**Optical Fibers Scramble Input light very well. Perfect scrambling in azimuthal** direction, imperfect in radial. Double scramblers, octagonal fibers help

# The NIR Bands

The Y band is quite clean compared to J and H, and has the most amount of RV information for mid-late M dwarfs.....

### The NIR Bands

The Y and z bands contribute most of the NIR RV information

### HPF on HET

Covers Y & J bands with one H2RG, with optics built to enable a future upgrade to an H4RG

## HPF on HET: Baseline Design

- R~ 50,000
- f/3.65 fiber input at telescope focal plane
- 3pixel sampling of Resolution element
- 4% efficiency assuming 7m unobstructed HET aperture
- RV precision < 3m/s (requirement), goal of 1m/s
- H2RG cooled to 80K
- Rest of instrument cooled to 170-200K

### HPF on HET: Survey

Design

300

200

100

50

# of M

stars

Need a large number of RV observations. Sample is ~300 M dwarfs, with ~50 most promising getting 100 observations.

Whole HPF Survey is HET queue based

### HPF on HET

Target Lists being populated, Fe/H, visni's being determined for a large number of M dwarfs with IRTF & APOGEE.

### HPF on HET

Target Lists being populated, Fe/H, visni's being determined for a large number of M dwarfs with IRTF & APOGEE.

# Pathfinder Instrument @ PSU

Pathfinder : One that discovers a new course or way, especially through or into unexplored regions.

•Penn State NIR Pathfinder spectrograph is a test bed to explore challenges in precision NIR radial velocities.

•Pathfinder is a testbed built from existing off the shelf available parts. Uncooled, uses a H1 array that is sensitive to 2.5µm

• Pathfinder is currently the only high resolution fiber fed NIR astronomical spectrograph testbed built for RV precision

### Fibers

Echelle

Cross Disperse

Dewar

#### Pathfinder : On 'Sky' Performance in Lab

Radial Velocity Precision - 70-Second Bins 300 Theoretical (2007 Observed (2007 Theoretical (2006) 200Observed (2006) 100 RV (m/s) 0 -100-200-300 50 Residual (m/s) 0 -50 50 Ο -5015 16 17 18 14 202119 Ramsey et al. 2008 Time (UT)

Achieve 7-10m/s rms scatter on Sunlight with two different configurations and simultaneous Th-Ar calibration. Suggests detector issues like persistence and parasitic ghosting are not a killer at ~< 10m/s. This is short term stability.

# Challenges: Calibration

U has a lot more bright lines in the NIR than Thorium. Argon lines are extremely bright and not usable at precisions of few m/s

**U-Ne lamps now in routine use in Pathfinder** 

An FTS NIR Linelist OF Uranium lamps now published and available: Redman et al. 2011, 2012

### Pathfinder @ HET

Observations of Tau Boo with Pathfinder@ HET

#### The Penn State PATHFINDER @ the HET

Y band Spectra!

#### Laser Frequency Combs Tested with Pathfinder

Spacing too tight for an astronomical spectrograph, need to pick every 100<sup>th</sup> line.

Exquisite precision. Tied to the GPS, tied to the SI definition of a second.

#### Laser Frequency Combs

Our NIST/CU collaborators (Diddams, Osterman, Ycas) had, in mid 2010, begun to demonstrate H band combs with spacings of 12.5 and 25 GHz

Exquisite precision. Tied to the GPS, tied to the SI definition of a second

# RVs with Simultaneous Ref.

### On-Star RV Results with a NIR Frequency Comb!

<u>May-August 2010: 7-15m/s Rv precision</u> <u>"Absolute" RV for Eta Cas consistent with Nidever</u> et al. 2002 to ~25m/s

An FTS NIR Comb-Calibrated H band of Uranium lamps now published and available: Redman et al. 2012, APJS

### LFC For HPF

- Not funded by MRI. Need to pursue funding from NSF/NASA
- Will be necessary achieve 1m/s
- Design Fabry Perots for each band separately

1550

nm

### Machine Agitated

Figure 4-12: 1550 nm laser diode tests (Xenics camera) – (top left) static image, (top right) static image 2D FFT, (middle left) mechanical vibration image, (middle left) mechanical vibration image 2D FFT, (bottom left) hand agitation image, (bottom right) hand agitation image 2D FFT.

Noise due to Finite # of TE TM modes in Flber

#### Modal Noise Experiment: J band

Ratio of consecutive Flats with no fiber disturbance

Ratio of consecutive Flats with fiber disturbance Ratio of consecutive Flats with fiber disturbance and vibration

NIR modal noise , even coupling SMF to MMFs, is substantially mitigated by bulk agitation of fiber

NIR modal noise , even coupling SMF to MMFs, is substantially mitigated by bulk agitation of fiber

## HPF Cryostat

HPF Cryostat is based on the very successful design of the recently commissioned SDSS-APOGEE NIR Spectrograph

## Calibration Is KEY

### PATHFINDER ~10m/s

U/Ne, Freq. Comb.

SDSS APOGEE ~100m/s

Th-Ar, U-Ne, Sky OH

# Fiber Fabry Perot: FFP

MICRON FFP-I OPTICS Interferometer

Rih

Rth

Fiber Fabry Perot: Compact, Insensitive to Vibrations.Collimation is not a Problem. Halverson et al. 2012

Needs a supercontinuum source to feed enough light through the 8micron core. Expected Stability ~1m/s

#### 1.6955 um

1.5141 µm

FFP Provides: Resolution, PSF, Persistence, Instrument Drift calibration.....

~3-5m/s structure seen after removing ~50m/s Linear trend. Calibration is KEY!

#### Average residuals, linear trend

~3-5m/s structure seen after removing ~50m/s Linear trend. Now Developing a Y&J band FFP for HPF.

### APOGEE+KEPLER

Can efficiently observe all KOIs with APOGEE on SDSS in the NIR H band. R~22.5k, 10 epochs of RVs at ~100m/s Excellent way to identify false positives, additional companions, elemental abundances etc..

### APOGEE+KEPLER

Proposed as a Key Project for APOGEE as part of the Next phase of SDSS starting in Fall 2014. Paper (Fleming et al.) being submitted this week.

# SMF Spectrographs

Single mode fibers coupled with high Strehl AO systems enable compact NIR instruments, with 'perfect scrambling'.

Number of groups considering, testing simple variants (Mutterspaugh et al. 2012, Schwab et al. 2012, Crepp private communication)

Image Credit: Christian Schwab, 2012 IAU

# SMF Spectrographs

Supercontinuum source	Cross-disp. grating	
Echelle	Camera lens	
Collimator		
• * •		

Significant Potential to enhance the state of The field, and achieve new levels of RV precision.

Some Cautionary notes: SMFs have two polarization modes. Modal noise has not gone away completely due to polarization dependence of gratings etc. (Mahadevan Et al. in prep)

Image Credit: Christian Schwab, 2012 IAU

### Can We (eventually) Detect Earth Mass Planets in the HZs of Solar Type stars with RV?

Technically: Probably Yes

The best spectrographs May well deliver ~10cm/s innate precision in the coming decade. Aspects of stellar activity will be wavelength dependent, allowing optical and NIR spectrographs together to discriminate against these...

Sociological Issues in Deploying Significant time on Large expensive facilities on small subsets of bright stars.

### In Summary

•Significant challenges in NIR RVs are being overcome with AMO/Laser Physics, astrophotonics, filter design, astronomical spectrograph design etc.

•Testbeds are REALLY useful......

•HPF is being built, incorporating lessons learnt from Pathfinder & APOGEE

•By their nature, NIR instruments cost more money. Sustained investment in technology, as well as innovative use of existing instruments, will likely lead to significant progress in RV precision.
