

SOCIOLOGICAL AND ORGANIZATIONAL CHALLENGES

1. Determining the weights of the correlations and derivatives requires an integrated science and technology approach:
 - Strong, consistent, and coordinated communication between scientists, instrument builders, engineers, & industry.
 - Integrated Science and Technology Definition Teams (STDTs), *NOT* separate SDTs and TDTs!
2. Future NGOs will necessarily be multidisciplinary:
 - Equal representation from advocates of all enabled science: cosmic origins, physics of the cosmos, exoplanets, planetary science, others?
 - Avoid parochial viewpoints! These only serve to divide the community!
3. Inclusivity and outreach is key:
 - These are the future observatories for the global astronomical community, and all of humanity.
